Long Answer: Many computer languages (including most C based languages) allow one to write numbers using E-notation, a form of scientific notation, where the number preceding the letter E is multiplied by ten to the power of the number following the E. Thus, " 10E9 " means 10 x 10 9, or 10,000,000,000.

With an accessible treatment that only requires a calculus prerequisite, Burden and Faires explain how, why, and when approximation techniques can be expected to work, and why, in some situations, they fail. A wealth of examples and exercises develop students' intuition, and demonstrate the subject's practical applications to important everyday problems in math, computing, engineering, and physical science disciplines. The first book of its kind built from the ground up to serve a diverse undergraduate audience, three decades later Burden and Faires remains the definitive introduction to a vital and practical subject.
