Fluid Motion . All engines need lubrication of some kind. Automatic transmissions use a special kind of fluid that serves a dual purpose by lubricating moving parts like a motor oil and also keeping the transmission from overheating like a coolant. Manual transmissions, on the other hand, can accept a variety of fluids, depending on the make and model of the vehicle.

...

Automatic transmission fluid is a kind of transmission fluid used in vehicles with self-shifting or automatic transmissions. It is typically coloured red or green to distinguish it from motor oil and other fluids in the vehicle. The fluid is optimized for the special requirements of a transmission, such as valve operation, brake band friction, and the torque converter, as well as gear lubrication. ATF is also used as a hydraulic fluid in some power-assisted steering
