Again based on the Ford F-Series, the 1980-1986 Bronco is based upon the Ford F-150 (1980-1986 seventh generation). Although based on an all-new chassis, the Ford Bronco retained its 104 in (2,642 mm) wheelbase. Both transfer cases were replaced with a New Process 208 version. In front, the 1980-1986 Bronco is fitted with a Dana 44 front axle with Ford TTB (Twin Traction Beam) independent front suspension. As with the 1978-1979 Bronco, the rear axle is a leaf-sprung Ford 9-inch axle.

market niche when they bought surplus Jeeps and began exploring the rugged backcountry of the American West. This burgeoning market segment, which eventually became known as sport utility vehicles (SUVs), numbered about 40,000 units per year with offerings from Jeep, Scout, Toyota, and Land Rover. In 1966, Ford entered the fray with its Bronco, offering increased refinement, more power, and an innovative coil-spring front suspension. The Bronco caught on quickly and soon established a reputation as a solid backcountry performer. In Baja, the legendary accomplishments of racers such as Parnelli Jones, Rod Hall, and Bill Stroppe further cemented the bobtail's reputation for toughness. Ford moved upstream with the introduction of the larger Bronco for 1978, witnessing a huge increase in sales for the second-generation trucks. The Twin Traction Beam front end was introduced in the third generation, and further refinements including more aerodynamic styling, greater luxury, and more powerful fuel-injected engines came on board in the generations that followed. Through it all, the Bronco retained its reputation as a tough, versatile, and comfortable rig, both on and off the paved road. With the reintroduction of the Bronco for 2020, Ford is producing a vehicle for a whole new generation of enthusiasts that looks to bring modern styling and performance to the market while building on the 30-year heritage of the first five generations of the Bronco so dearly loved
