Why is the Mona Lisa the most famous painting in the world? Why did Facebook succeed when other social networking sites failed? Did the surge in Iraq really lead to less violence? And does higher pay incentivize people to work harder? If you think the answers to these questions are a matter of common sense, think again. As sociologist and network science pioneer Duncan Watts explains in this provocative book, the explanations that we give for the outcomes that we observe in life-explanations that seem obvious once we know the answer-are less useful than they seem. Watts shows how commonsense reasoning and history conspire to mislead us into thinking that we understand more about the world of human behavior than we do; and in turn, why attempts to predict, manage, or manipulate social and economic systems so often go awry. Only by understanding how and when common sense fails can we improve how we plan for the future, as well as understand the present-an argument that has important implications in politics, business, marketing, and even everyday life.

The same amount of water has been present on our planet for about 4 billion years, since shortly after the Earth was formed. Since then it has cycled through evaporation, condensation, precipitation and surface runoff multiple times. Water scarcity as an abiotic factor ranging from moderate to severe stress levels, accompanied by loss of moisture in the soil, is extremely hard for most organisms to cope with, particularly terrestrial plants and their food-chain dependents. Because of the potential for increasing temporary, or possibly permanent, drought conditions in the future, there is intense focus on improving plant resistance to drought and increasing yield performance in water-limited environments through genotype selection in important crops. This book aims to contribute to understanding of how plants and other organisms respond to water stress conditions, and the various survival strategies adopted under differing moisture levels.

security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

Now beyond its eleventh printing and translated into twelve languages, Michael Porter's *The Competitive Advantage of Nations* has changed completely our conception of how prosperity is created and sustained in the modern global economy. Porter's groundbreaking study of international competitiveness has shaped national policy in countries around the world. It has also transformed thinking and action in states, cities, companies, and even entire regions such as Central America. Based on research in ten leading trading nations, *The Competitive Advantage of Nations* offers the first theory of competitiveness based on the causes of the productivity with which companies compete. Porter shows how traditional comparative advantages such as natural resources and pools of labor have been superseded as sources of prosperity, and how broad macroeconomic accounts of competitiveness are insufficient. The book introduces Porter's "diamond," a whole new way to understand the competitive position of a nation (or other locations) in global competition that is now an integral part of international business thinking. Porter's concept of "clusters," or groups of interconnected firms, suppliers, related industries, and institutions that arise in particular locations, has become a new way for companies and governments to think about economies, assess the competitive advantage of locations, and set public policy. Even before publication of the book, Porter's theory had guided national reassessments in New Zealand and elsewhere. His ideas and personal involvement have shaped strategy in countries as diverse as the Netherlands, Portugal, Taiwan, Costa Rica, and India, and regions such as Massachusetts, California, and the Basque country. Hundreds of cluster initiatives have flourished throughout the world. In an era of intensifying global competition, this pathbreaking book on the new wealth of nations has become the standard by which all future work must be measured.

December 2, 2004, started out like any other day for Gary Tim Collins. As a University of Toledo alumnus, Gary was looking forward to the Mid-American Conference championship game at Ford Field against the University of Miami with his friends. But he wouldn't see or remember the game. Just as he was about to sit down to enjoy the game, he was struck with seizures that landed him in Henry Ford's Intensive Care Unit in a coma for two weeks. It was the prayers of friends and loved ones that helped bring him back. This traumatic experience brought Gary closer to God, when he had previously struggled with finding his purpose and really felt God had something else in mind for him. That something else turned out to be this book, *The Light That Illuminates the Flame*. In this book, Gary explores common themes of Christianity, like who God is, what he does in our lives, the importance of his Word, the life of Jesus Christ, and, in turn, the way we should live our lives as his faithful followers to draw near to him. It is a thank you to the Almighty God who gave all and saved a man from losing it

all. Marty Pennington Lead Pastor Mainstreet Church Walbridge, Ohio. Gary Tim Collins taught for over twenty-four years in the Toledo public school system, working with handicapped and disadvantaged high school students. He lives in Ohio and is actively involved in his church. This is his first book. This is a book that would be good for any growing Christian to read. Gary takes much of his personal life experiences and puts them into layman's terms so that all can learn and grow. As you, like all of us, struggle with life's issues, this book will certainly help you work with your own struggles as well as prepare you to help others on their journey of life. Terry R. Smith Congregational Care Pastor, Mainstreet Church

This book contains Massachusetts Uniform State Plumbing Code, 248 CMR for the all plumbing related codes for the Commonwealth of Massachusetts

For more than 160 years, the cannabis industry was a valued and trusted friend of the American people. Thirty-one consecutive presidents, including George Washington and Abraham Lincoln, didn't have a problem with the cannabis plant. It was the most valued commodity traded for on the free market until 1937. In *Secrets of the Cannabis Industry*, author Chuck Allen Jr. provides a look at the cannabis industry and the men and women who risk their family, friends, and freedom to work within it. Each chapter narrates a story from the subculture of cannabis entrepreneurs. There's Professor Muzzo, who unknowingly helped one of his students achieve financial success by selling a popular fast-food item spiced with a secret ingredient; a postal employee with a secret garden in his basement; an entrepreneur who made a fortune selling franchises for indoor-growing opportunities; and a fireman's wife who owned a video store with extra-special movie-rental benefits. *Secrets of the Cannabis Industry* considers the courage and the determination of these entrepreneurs and shares the secrets of how they became independent and financially successful in the cannabis industry.
