The Carnac stones are an exceptionally dense collection of megalithic sites in Brittany in northwestern France, consisting of stone alignments, dolmens, tumuli and single menhirs. More than 3,000 prehistoric standing stones were hewn from local granite and erected by the pre-Celtic people of Brittany, and form the largest such collection in the world. Most of the stones are within the Breton village of Carnac, but some to the east are within La Trinité-sur-Mer. The stones were erected at ...

The Carnac Stones in France are the largest collection of standing stones in the world, but there is also no real explanation for their purpose. The Carnac Stones in France are unlike any other megalithic structures that you've seen or read about in Europe. Unlike England's famous Stonehenge, which consists of a ring of standing stones, the Carnac Stones are made up of 3,000 stones that are either standing in patterns of scattered randomly in this French countryside.

Carnac is famous as the site of more than 10,000 Neolithic standing stones, also known as menhirs. The stones were hewn from local rock and erected by the pre-Celtic people of Brittany. Local tradition claims that the reason they stand in such perfectly straight lines is that they are a Roman legion turned to stone by Pope Cornelius.

Over 100 monuments, which include burial mounds, stone tombs, enclosures, and linear arrangements of menhirs, were erected between the 5th and 3rd millennia BCE by the Neolithic farming communities which inhabited the area of Carnac. Arrangements. The granite stones (megaliths), varying in size from 1 metre in height to huge 6.5-metre tall stones weighing several hundred tons, were removed (not quarried) from rocky outcrops in the surrounding area.

## Standing Stones Stonehenge Carnac And The World Of Megaliths Carnac Stonehenge And The World Of Megaliths New Horizons

Who built the megaliths, those massive stone structures ranging from tombs to standing stones that date back to over 4000 BC? Why were they built? How were the enormous stones transported and erected? Were these strange, sacred stones used as temples or tombs, sculptures or houses? Covering the best-known sites - Avebury and Stonehenge in England, Carnac in France and Knowth in Ireland - and also less famous examples in Scandinavia, Malta, Egypt and Spain, this book considers the special significance - architectural, scientific, religious and cultural - of these enigmatic Neolithic stone structures.

This book discusses the lines of standing stones that until now have been the neglected wonders of prehistoric Europe, rows that were foci of rituals in Britain, Ireland and Brittany for over two thousand years. Places such as Carnac in Brittany and Callanish in the Hebrides are visited by many visitors each year, but before now there has been no book that seriously explains the history, significance and background to these impressive sites. Aubrey Burl shows that the settings vary from pairs of isolated stones in the far south-west of Ireland to networks of long lines in Scotland, Dartmoor and Brittany, and describes the types in a sequence of architectural chapters that stress the increasing social and commercial connections between regions hundred of miles apart. He uses information from a wide variety of sources - excavation reports, megalithic art, astronomical analyses and legends - to provide explanations of why the rows were erected, when, and what they may have been used for.

Before breaking his lunar orbit, Snell reviewed his mission instructions: 1. Locate the lost Observer ship and salvage or destroy it. 2. Destroy any Syssophinx attempt to communicate with its home base. If possible, discover details about the Syssophinx race. 3. Find and communicate with the Lorelei. The first directive would be simple. As for the second one, either the Dark ship was destroyed or if not, so he had almost no chance to complete the directive. The Dark ships and their Syssophinx crews were the sworn enemies of all other life forms in the universe. No one really understood their avowed goal to extermination all life. Repeated negotiations had failed miserably. The second part of this directive was interesting. Behind its words, it demonstrated the Observers insatiable curiosity to know and to learn. The third directive was the most exciting, but probably not possible. When seen, descriptions of the Lorelei were always different, fantastic and contradictory. A Lorelei could be gaseous, liquid or solid, at will. It could be huge. Or small. It was intelligent. Or primal. It could communicate. Or it was pure life force. Even the Observers didnt know, and they knew everything. Snell smiled. Observers could not be omniscience and without knowledge at the same time. His elders lack of knowledge about either the Syssophinx or the Lorelei both amused and fascinated him. With determination, he activated his thrusters, broke orbit, and slipped toward the planet below. He did not understand just how difficult fulfilling any the directives would be.

Describes such ancient sites from the Late Neolithic and Early Bronze Ages as Stonehenge and Carnac, noting their development of geometry and astronomy

Even the most inventive and revolutionary architects of today owe debts to the past, often to the distant past when architecture really was being invented for the first time. Architects depend on their own imaginations for personal insights and originality but their ideas may be stimulated (consciously or subliminally) by particularly powerful buildings from history. The Ten Most Influential Buildings in History: Architecture's Archetypes identifies ten architectural archetypes that have been sources of inspiration for architects through the centuries. Each archetype is analysed through distinctive examples, following the methodology established by the author in his previous books. The variety of 'lines of enquiry' each archetype has provoked in later-day architects are then explored by analysing their work to reveal ideas inspired by those earlier buildings. Archetypes have a timeless relevance. In adopting this approach, The Ten Most Influential Buildings in History is as pertinent to contemporary practice as it is to understanding buildings from antiquity, and offers insights into the bridges of influence that can operate between the two.

Based on the author's decipherment of prehistoric carvings and the application of mathematical measurements, The Gods' Machines shows how "unknown" phenomena from Angkor Wat to Stonehenge to crop circles are actually powerhouses built by an advanced extraterrestrial civilization for tapping electromagnetic energy. The book traces the development of that civilization on Earth over 5,000 years, revealing how all these structures are aligned according to a universal formula: an angle of 135 degrees at which Earth's energy has been tapped by the alien creators of these monuments. These fascinating theories not only explain our distant past, but also open the door to a future of power technology and space travel. Megalithic sites such as Newgrange and Stonehenge are constructed with quartz- and iron-rich stones with electrical conduction properties — minerals also found atop Aztec temple and inside crop circles. These stones, according to the author, served as dry cell batteries when heated and stressed, and supplied energy to the builders' traveling vehicles. Most interestingly, the author has tested his theory on today's crop circles. The Gods' Machines is certain to stimulate debate among readers interested in alternative history, ancient civilization, and extraterrestrial intelligence.

Natasha Hoffman describes her personal pilgrimages to the standing stones of Carnac, France which she calls a vast wisdom library holding an encoded message from the archangels relating the early history of humankind to the problems of today and providing hope and inspiration for the future.

This book is an inquiry into the relationships between archaeology, colonialism and ecotourism at the famous standing stones of Hintang, Laos. It investigates the conditions under which archaeological knowledge has been produced, appropriated, contested, commodified, and consumed by colonialism from the 1930s until today and what it shows about the power dynamics of heritage and ecotourism. The volume-explores how the discourses of colonialism and ecotourism affect tourists, archaeologists, heritage managers, and the local community;-is written as a set of overlapping creative essays, each giving an overlapping perspective on Hintang;-is a multidisciplinary research project based on ethnographic fieldwork, archival research, interviews with community members, biography, material culture studies, and text analysis.

Religions and mythologies from around the world teach that God or gods created humans. Atheist, humanist, and materialist critics, meanwhile, have attempted to turn theology on its head, claiming that religion is a human invention. In this book, E. Fuller Torrey draws on cutting-edge neuroscience research to propose a startling answer to the ultimate question, Evolving Brains. Emerging Gods locates the origin of gods within the human brain, arguing that religious belief is a by-product of evolution. Based on an idea originally proposed by Charles Darwin, Torrey marshals evidence that the emergence of gods was an incidental consequence of several evolutionary factors. Using data ranging from ancient skulls and artifacts to brain imaging, primatology, and child development studies, this book traces how new cognitive abilities gave rise to new behaviors. For instance, autobiographical memory, the ability to project ourselves backward and forward in time, gave Homo sapiens a competitive advantage. However, it also led to comprehension of mortality, spurring belief in an alternative to death. Torrey details the neurobiological sequence that explains why the gods appeared when they did, connecting archaeological findings including clothing, art, farming, and urbanization to cognitive developments. This book does not dismiss belief but rather presents religious belief as an inevitable outcome of brain evolution. Providing clear and accessible explanations of evolutionary neuroscience, Evolving Brains, Emerging Gods will shed new light on the mechanics of our deepest mysteries.

In this thrilling novel, Dr. Liam Kelly PhD, SJ, is a renowned scholar of Biblical history who has spent a lifetime researching pre-Christian documents in the Vatican archives. With his knowledge of a dozen ancient languages, he compiles a dossier of the secrets of the archives and uncovers startling linked secret meaning of the Pyramids Stonehenge. But he learns the story can never be told, because twisted through the threads of pagan history are other dark secrets the Church does not want to reveal. Dr. Kelly wrestles with his inner demons, torn between loyalty to his Church and the temptation of telling the truth. At risk to his personal safety, he defies Church hierarchy to find a way to reveal the old knowledge of pagan mysteries.
