actually measures the effect of another factor, a confounding variable. As most medical studies attempt to investigate disease etiology and causal relationships, confounding is regarded as undesirable, as it obscures the 'real ...

~~Confounding: What it is and how to deal with it ...~~

A confounding variable is independently associated with both the risk factor (exposure) and the disease (outcome). Because of the dual association, the confounding variable creates a false association between the risk factor and disease or can exaggerate or hide a true association.
